 .....Each

## Cheese Hoops and Accessories

Stainless steel hoops are well constructed and sanitary. Daisy hoop has 3 parts (hoop, bandager and follower) but longhorn hoop has only 2(w/o follower). S.S. follower hook with T-handle is useful for quick removal of followers (lids). Save money by inserting rubber rings (gaskets) ahead of the follower, to prevent curd from squeezing past follower. The hard rubber blocks are appreciated by those who use them for knocking cheese out of hoops - protects working surface as well as hoop!
